

MalScope - Automated Malware Analysis Report

1. Executive Summary

Target File: Abdelaziz Ahmed - Copy.doc

Scan Date: 2026-05-09 19:13:37

Final Verdict: **SUSPICIOUS**

Risk Score: 55/100

2. AI Threat Intelligence Summary

1. Threat Summary: The file Abdelaziz Ahmed - Copy.doc acts as a document-based downloader likely utilizing malicious macros or embedded scripts to execute external commands. It attempts to establish a connection to a suspicious remote server and initiate a secondary payload download, posing a significant risk of remote code execution.

2. Suspicious Indicators:

- Entropy of 6.8 suggests potential obfuscation or encrypted content within the document structure.
- Presence of an external URL <http://malicious.com/payload.exe> indicating an attempt to fetch a malicious executable.
- Process execution of cmd.exe following the opening of the document, which is typical behavior for malicious macro exploitation.
- Network activity indicating an outbound connection to an internal or lateral IP 192.168.1.100 on port 443, suggesting command-and-control communication or internal pivoting.

3. Recommended Response:

- Immediately isolate the host machine from the network to prevent further outbound communication or lateral movement.
- Extract and analyze the document using static analysis tools like oledump or oletools to identify and de-obfuscate the malicious VBA macro code.
- Conduct a memory dump of the affected system to inspect the state of the cmd.exe process and identify potential injected code.
- Perform a thorough audit of the internal network traffic logs to determine if 192.168.1.100 has been compromised or serves as a staging point for further attacks.
- Wipe or re-image the compromised host and enforce strict macro execution policies via Group Policy to prevent similar document-based threats in the future.

3. Technical Data

Static Analysis Findings:

- entropy: 6.8
- pe_sections: 5
- urls: ['<http://malicious.com/payload.exe>']

Dynamic Analysis Findings:

- processes: ['cmd.exe (PID: 4512)']
- network: ['Outbound to 192.168.1.100:443']
